

Welcome to the OSGeo:UK Newsletter

Hello and welcome to the OSGeo:UK newsletter in which we share updates and information every couple of months about the OSGeo:UK local chapter along with general FOSS for geospatial goodness. Please share the newsletter widely. Interested folks can [sign up](#) too. For now, please enjoy this edition.

News from OSGeo:UK

Find out more about OSGeo:UK and how you can be part of our community on our [website](#).

A Bristol Event

The local organising crew have been hard at work over the last couple of months making sure that [FOSS4G:UK South West 2024](#) goes ahead. This is going to be an event similar in scope to the local events that were held in various locations in 2023 and one not to be missed: make sure you block out your diaries for 12th November 2024.

If you like free and open source software, geospatial technologies and/or open data and communities then this is the event for you!

Once again, we send our thanks to [CGI](#) for their generous sponsoring of the venue (the [Engine Shed](#) just outside Bristol Temple Meads station). We also have a second sponsor to thank for their support: [Telespazio](#). There are still sponsorship opportunities available for your organisation to help make the event run at as low a cost as possible for attendees - [please reach out to the organisers for sponsorship details](#) (no amount is too small - or too large!).

The presentations and agenda for the day are now live (check out: <https://uk.osgeo.org/foss4guk2024/bristol.html#programme>) and if you like what you see then you can [register using this link](#). The cost of the full day is only £20 so see you there! Be quick, as demand is anticipated to be high.

Nick's book

Our Committee Chair, [Nick Bearman](#), has a [new book](#) out! If you have recently started to use, or are interested in using, the R language to undertake spatial analyses then this is the book for you. In this book, Nick takes you through the basics of GIS and R, including visualisation and analysis techniques. No prior knowledge of scripting is assumed (although it is helpful to know a little about GIS and spatial data). The book also emphasises code reusability, and knowledge sharing; two concepts very close to the ethos of OSGeo.

OSGeo-related Projects

FOSS4G:UK South West Sponsors

For this issue of the newsletter we want to briefly highlight some FOSS4G:UK South West sponsors of the work undertaken by our FOSS4G:UK Southwest sponsors. CGI have been involved in the build of the [Data Map Wales](#) portal, an open data portal for the Welsh Government that provides a shared platform to members of the public and public authorities. The portal has implemented opensource tools such as [GeoNode](#) and Geoserver. Telespazio are involved in the OSGeo Community project [EOEPCA+](#) which is trying to enhance the interoperability between different cloud-based data platforms by enabling federation amongst those platforms through reusable code and components. You can find out more about the EOEPCA+ project, as well as another Telespazio are involved in called [EarthCODE](#), at the Bristol event in November.

PROJECTS WE FUND

Our annual [GoFundGeo](#) mechanism, for the period between the 2023 and 2024 AGMs, distributed more than £5000 across seven projects (see the [OSGeo:UK website](#) for the full list). Keep an eye out for the call for projects to fund in 2024 - 2025. A final decision will be made at the 2024 AGM the date for which will be announced on the OSGeo:UK website.

James Milner continues to develop [Terra Draw](#). Recently he has added sensor mode functionality to the tool: you can find out more [here](#).

Wider software and event news

This is our final reminder that the [international FOSS4G 2024](#) event is being held between December 1-8, 2024 in [Belém](#), Brazil. Register to find out what is new and exciting in open software, data, and communities from around the world and keep an eye on their website for announcements and updates. To find out more you can check out this episode of the [Geomob podcast](#) where co-host Steven speaks with the conference organisers about what is involved in putting together the global event.

Other events

The [Association for Geographic Information](#) GeoCom - later this year in the UK (28 November in London, respectively) so you might want to check it out.

If you are interested in sorting out your calendar for 2025 then checkout this [handy list](#) from [Jakub Nowosad](#).

If you are putting on a geo event with a link to open source software and want it to be mentioned in the newsletter then please get in touch via the details on the OSGeo:UK website. And consider adding it to Jakub's online list.

In wider geospatial FOSS news...

There are a couple of exciting announcements from the Orfeo Tool project: [OTB 9.1.0](#) has been released, and the [OTB User Days](#) for 2024 will be held on November 21-22 in Toulouse, France. Presentations will be held in the morning, and brainstorming in the afternoon. Check out the links for more details.

OpenLayers has had another point release, and is now on 10.2.1. Checkout [this page](#) for details about the new features.

Similarly, September saw a point release for Geoserver ([2.26](#)) so if you've not looked at that project for while, go check it out.

We hope that you found this edition of the newsletter interesting and informative. If you have any feedback or comments then let us know!
